INTRODUCTION

Lotteries, binary options, various economic games with the possibility of earning real profits, and other forms of gambling attract millions of risk-takers from around the world every year. Some of these gamblers just want to relax after a hard day, while others are attracted by the hope of hitting a jackpot. Many countries have rather strict laws governing the gambling industry, which is why more and more players are choosing online services.

The popularity of lotteries and gambling in recent decades show absolutely no signs of declining, as, especially in developed countries, many people seek out even a small chance to win a jackpot for a modest sum of money. However, every year that passes, the problems of traditional services are becoming more and more obvious:

- **Geographic restrictions.**

Most traditional lotteries are run on a national basis. If you live in another country, no matter how lucky you are, you won't win.

- **No Transparency.**

No one can guarantee that the winning combination is indeed randomly generated or that the individuals numbers are distributed randomly.

- **Distribution of Funds.**

Less than 50% of proceeds from selling tickets in traditional lotteries go to the formation of the prize fund.

- **Lack of Anonymity.**

You can buy a ticket while keeping your identity a secret, but it is not possible to receive your winnings anonymously. This is due to legal requirements, since all winnings are taxed.

All these problems lead to logical concerns and disappointments for users, who will unsurprisingly start seeking alternatives. Using blockchain is the only way to improve things in this industry.

SPECIALIZED PLATFORM

Not everyone who is interested in investing is addicted to lotteries and gambling, just like not all gamblers are crypto enthusiasts. Therefore, for the convenience of users, gaming services with the possibility of earning real profits, such as blockchain lottery, binary options, or economic games, should be hosted on specialized platforms. One such platform is **Wynn Games**.

Using the Wynn Games platform, users can:

- Create a user account;
- Register a wallet to store cryptocurrency;
- Replenish, store, and withdraw tokens;
- Purchase lottery tickets;
- Increase their chances of winning by purchasing additional numbers in lottery tickets;
- Use binary options;
- Check the current prize pool;
- Become acquainted with the winning combinations for the current drawing;
- Analyze the results of previous draws;
- Receive data about top players;
- And purchase Wynn tokens.

A simple, convenient, and intuitive interface, specially designed for lotteries and binary options, will make it easy for even novice players to figure out the process.

USING THE WYNN TOKEN

All payments within the **Wynn Games** platform are made only in cryptocurrency. The platform accepts for payment: Tron (TRX), Tether (TRC-20), and its own native Wynn token. The number of tokens available for payment will increase. Information about all updates will be available on our website (<https://wynn-games.com/>).

The aforementioned cryptocurrencies can be used to purchase tickets and contracts. Winnings are also paid in the same cryptocurrencies.

Using the native **Wynn token** provides a number of advantages over other cryptocurrencies, namely:

- Allows you to purchase tickets or contracts with a commission of 0% (instead of the standard 10%);
- Provides you with an opportunity to participate in the loyalty program for VIP-level users, with a dynamically growing discount (from 1.1% to 10.1%) for the purchase of a ticket or contract;
- And opens up the opportunity to participate in the referral program.

Technical Characteristics of the Wynn Token:

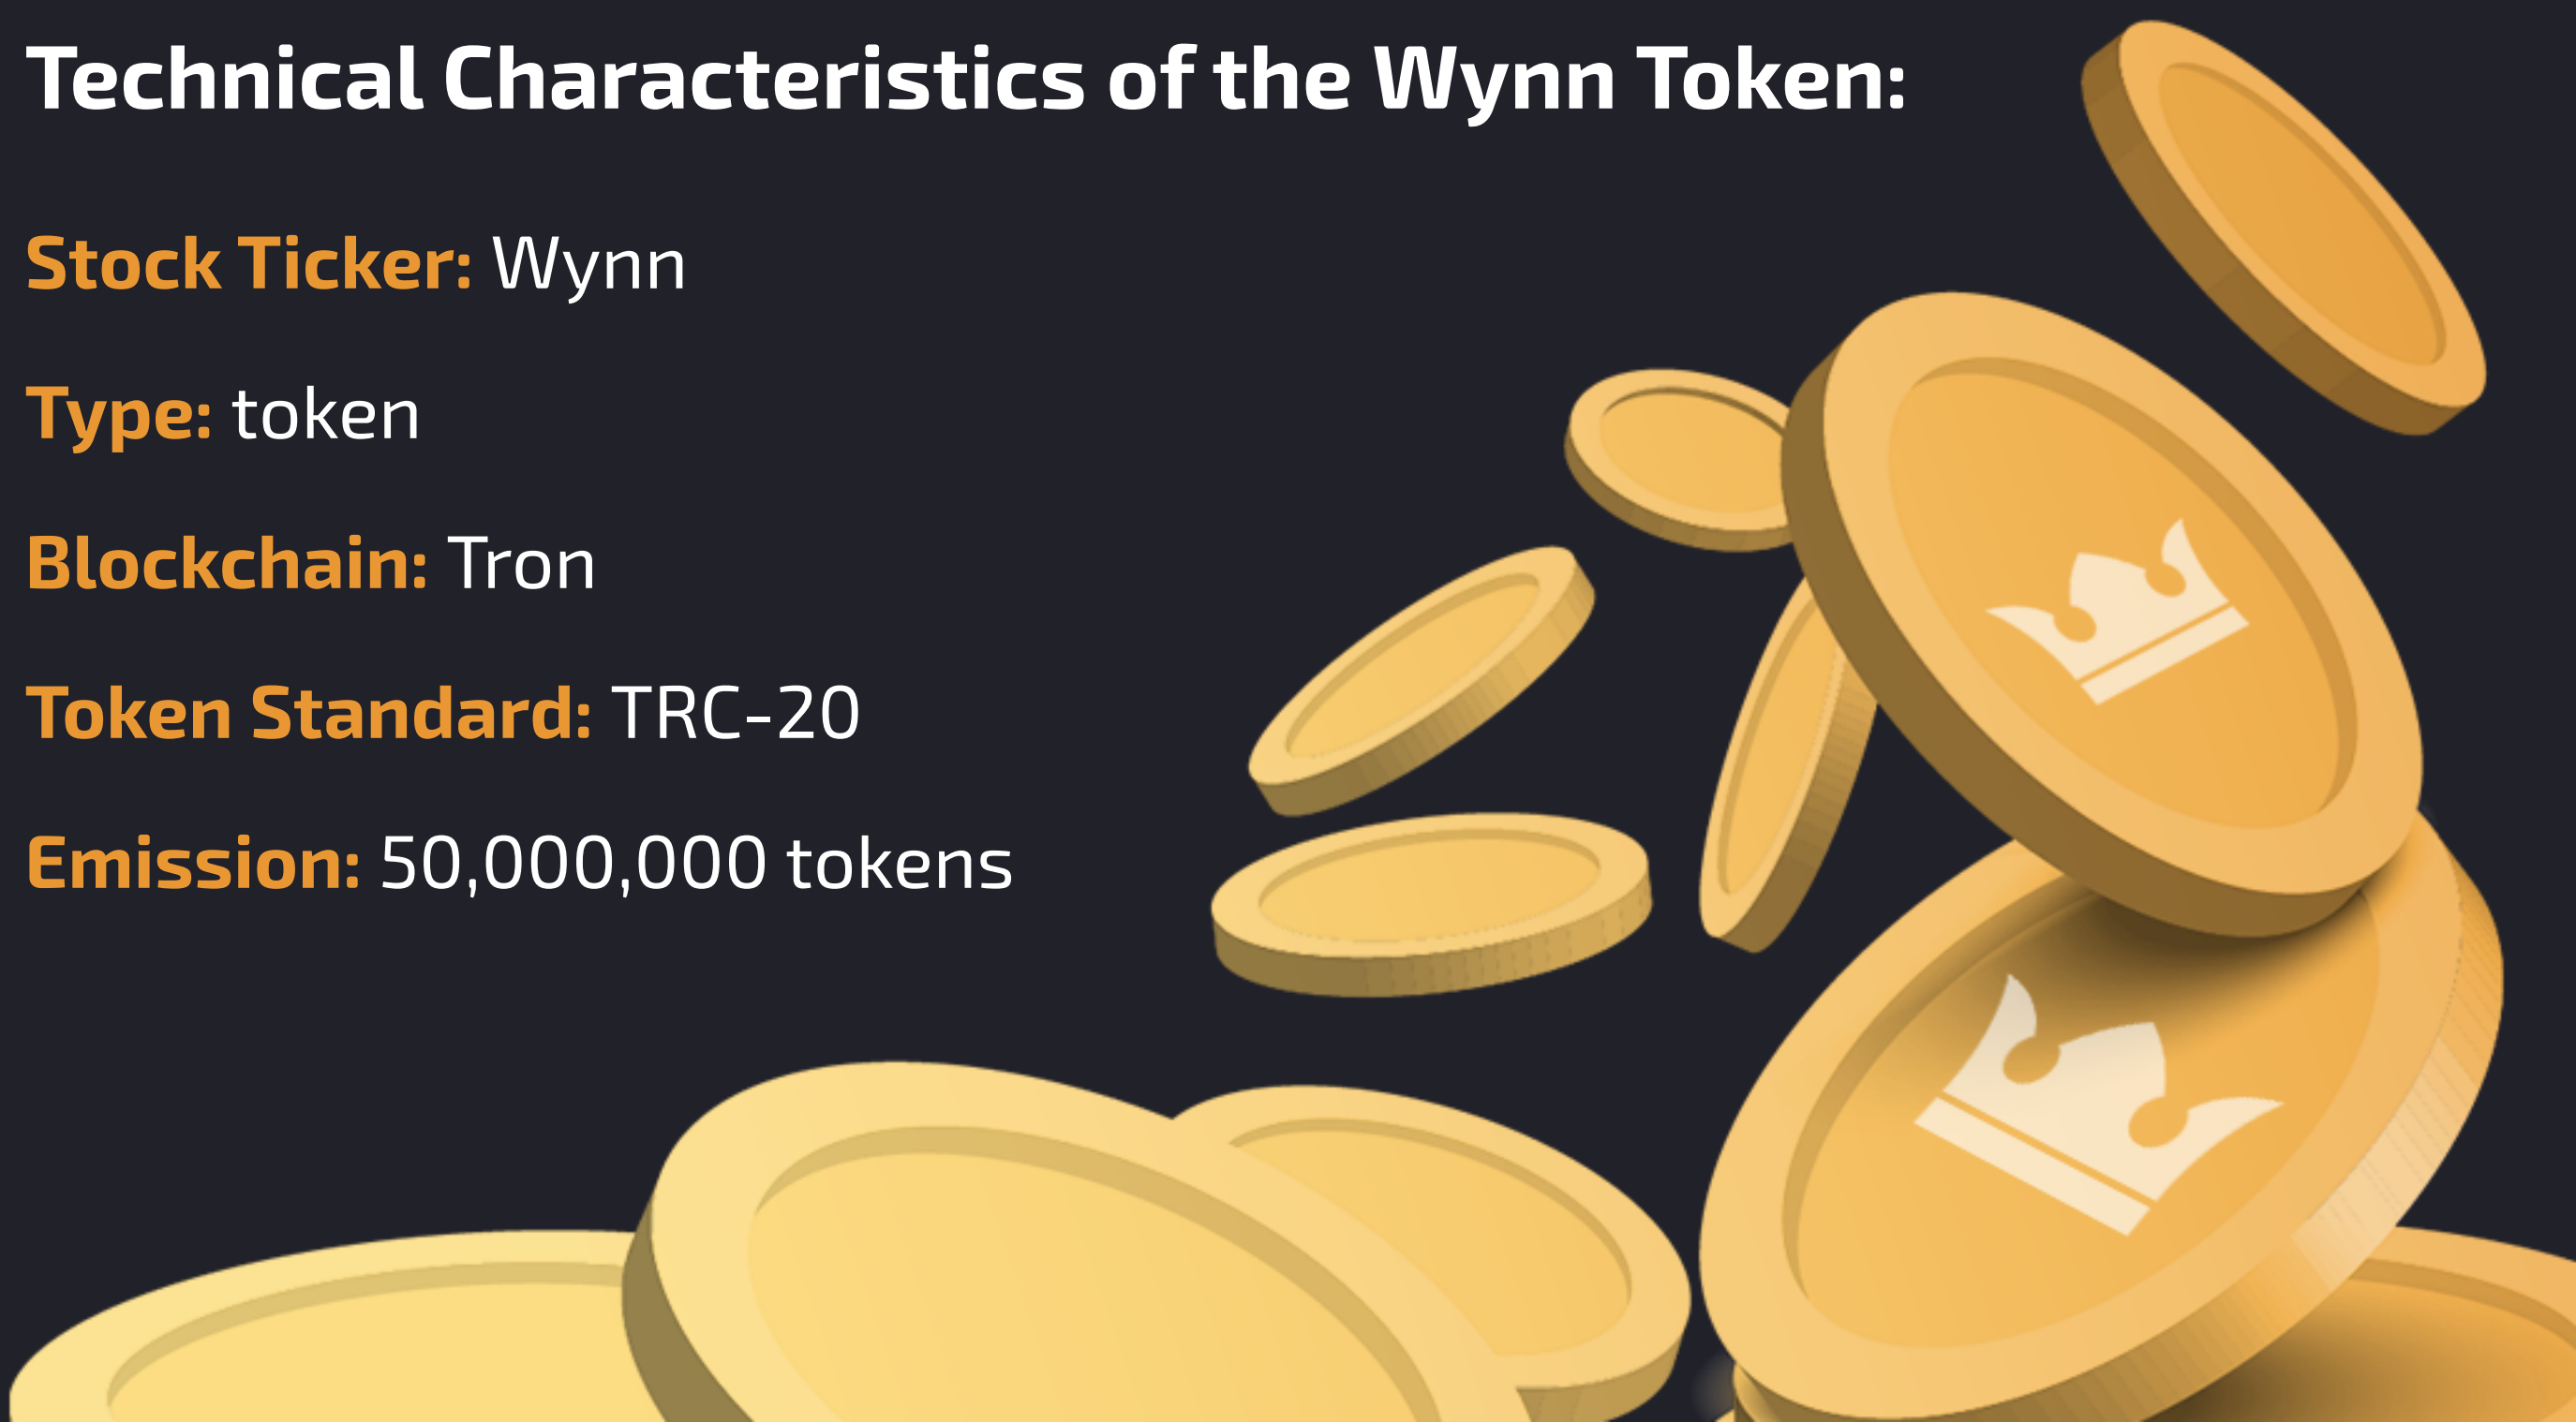

Stock Ticker: Wynn

Type: token

Blockchain: Tron

Token Standard: TRC-20

Emission: 50,000,000 tokens

INITIAL DISTRIBUTION

The total emission of the Wynn token is **50,000,000** tokens, which are distributed on special system wallets, each of which has its own intended purpose. This excludes irrational or inappropriate use.

6% or 3 000 000 Wynn - Reserved for pre-sale

15% or 7 500 000 Wynn - Reserved for replenishing the lottery prize fund

15% or 7 500 000 Wynn - Reserved for replenishing the prize fund of a binary option

20% or 10 000 000 Wynn - A marketing fund for promoting and scaling the project

10% or 5 000 000 Wynn - The development team fund is frozen

34% or 17 000 000 Wynn - An operational wallet for replenishing the prize fund of gaming services under development

BLOCKCHAIN LOTTERY:

«WYNN LOTTO»

The basic formula for **Wynn Lotto** is “5 out of 36”. In other words, to win the maximum prize, you need to match 5 numbers out of 36. This is an “old school” lottery formula. Currently, traditional lotteries often use “6 out of 45”, “7 out of 49”, and so on.

What is the fundamental difference? The probability of matching 5 numbers out of 36 is 1 in 376,992. For “7 out of 49”, the odds drop to 1 in 85,900,584. The difference is clear. In addition, the lottery provides an opportunity to increase your chances of winning by buying up to 4 additional numbers in addition to the standard 5. In other words, you still need to match 5 numbers out of 36, but you will have 9 attempts instead of 5.

As a result, the probability of winning is significantly increased. However, for each additional number, you will have to make a separate payment:

Quantity of Numbers in the Ticket	Price, USDT
Standard Ticket: 5 numbers	1
+1 additional number per ticket	2
+2 additional numbers per ticket	3
+3 additional numbers per ticket	5
+4 additional numbers per ticket	8

Thanks to the use of blockchain technology, it became possible to offer players these increased chances of winning, as almost all funds that players spend (the network commission has not been canceled) are added to the prize fund. The team has no interest players winning only seldomly. On the contrary, the chance to catch a lucky break is given to as many people as possible. That is why such high odds and regular draws have been introduced.

FORMATION OF WYNN LOTTO

The prize fund of each lottery drawing consists of tokens earned from ticket sales. In fact, the prize fund receives 90% of the collected funds, which are distributed as follows:

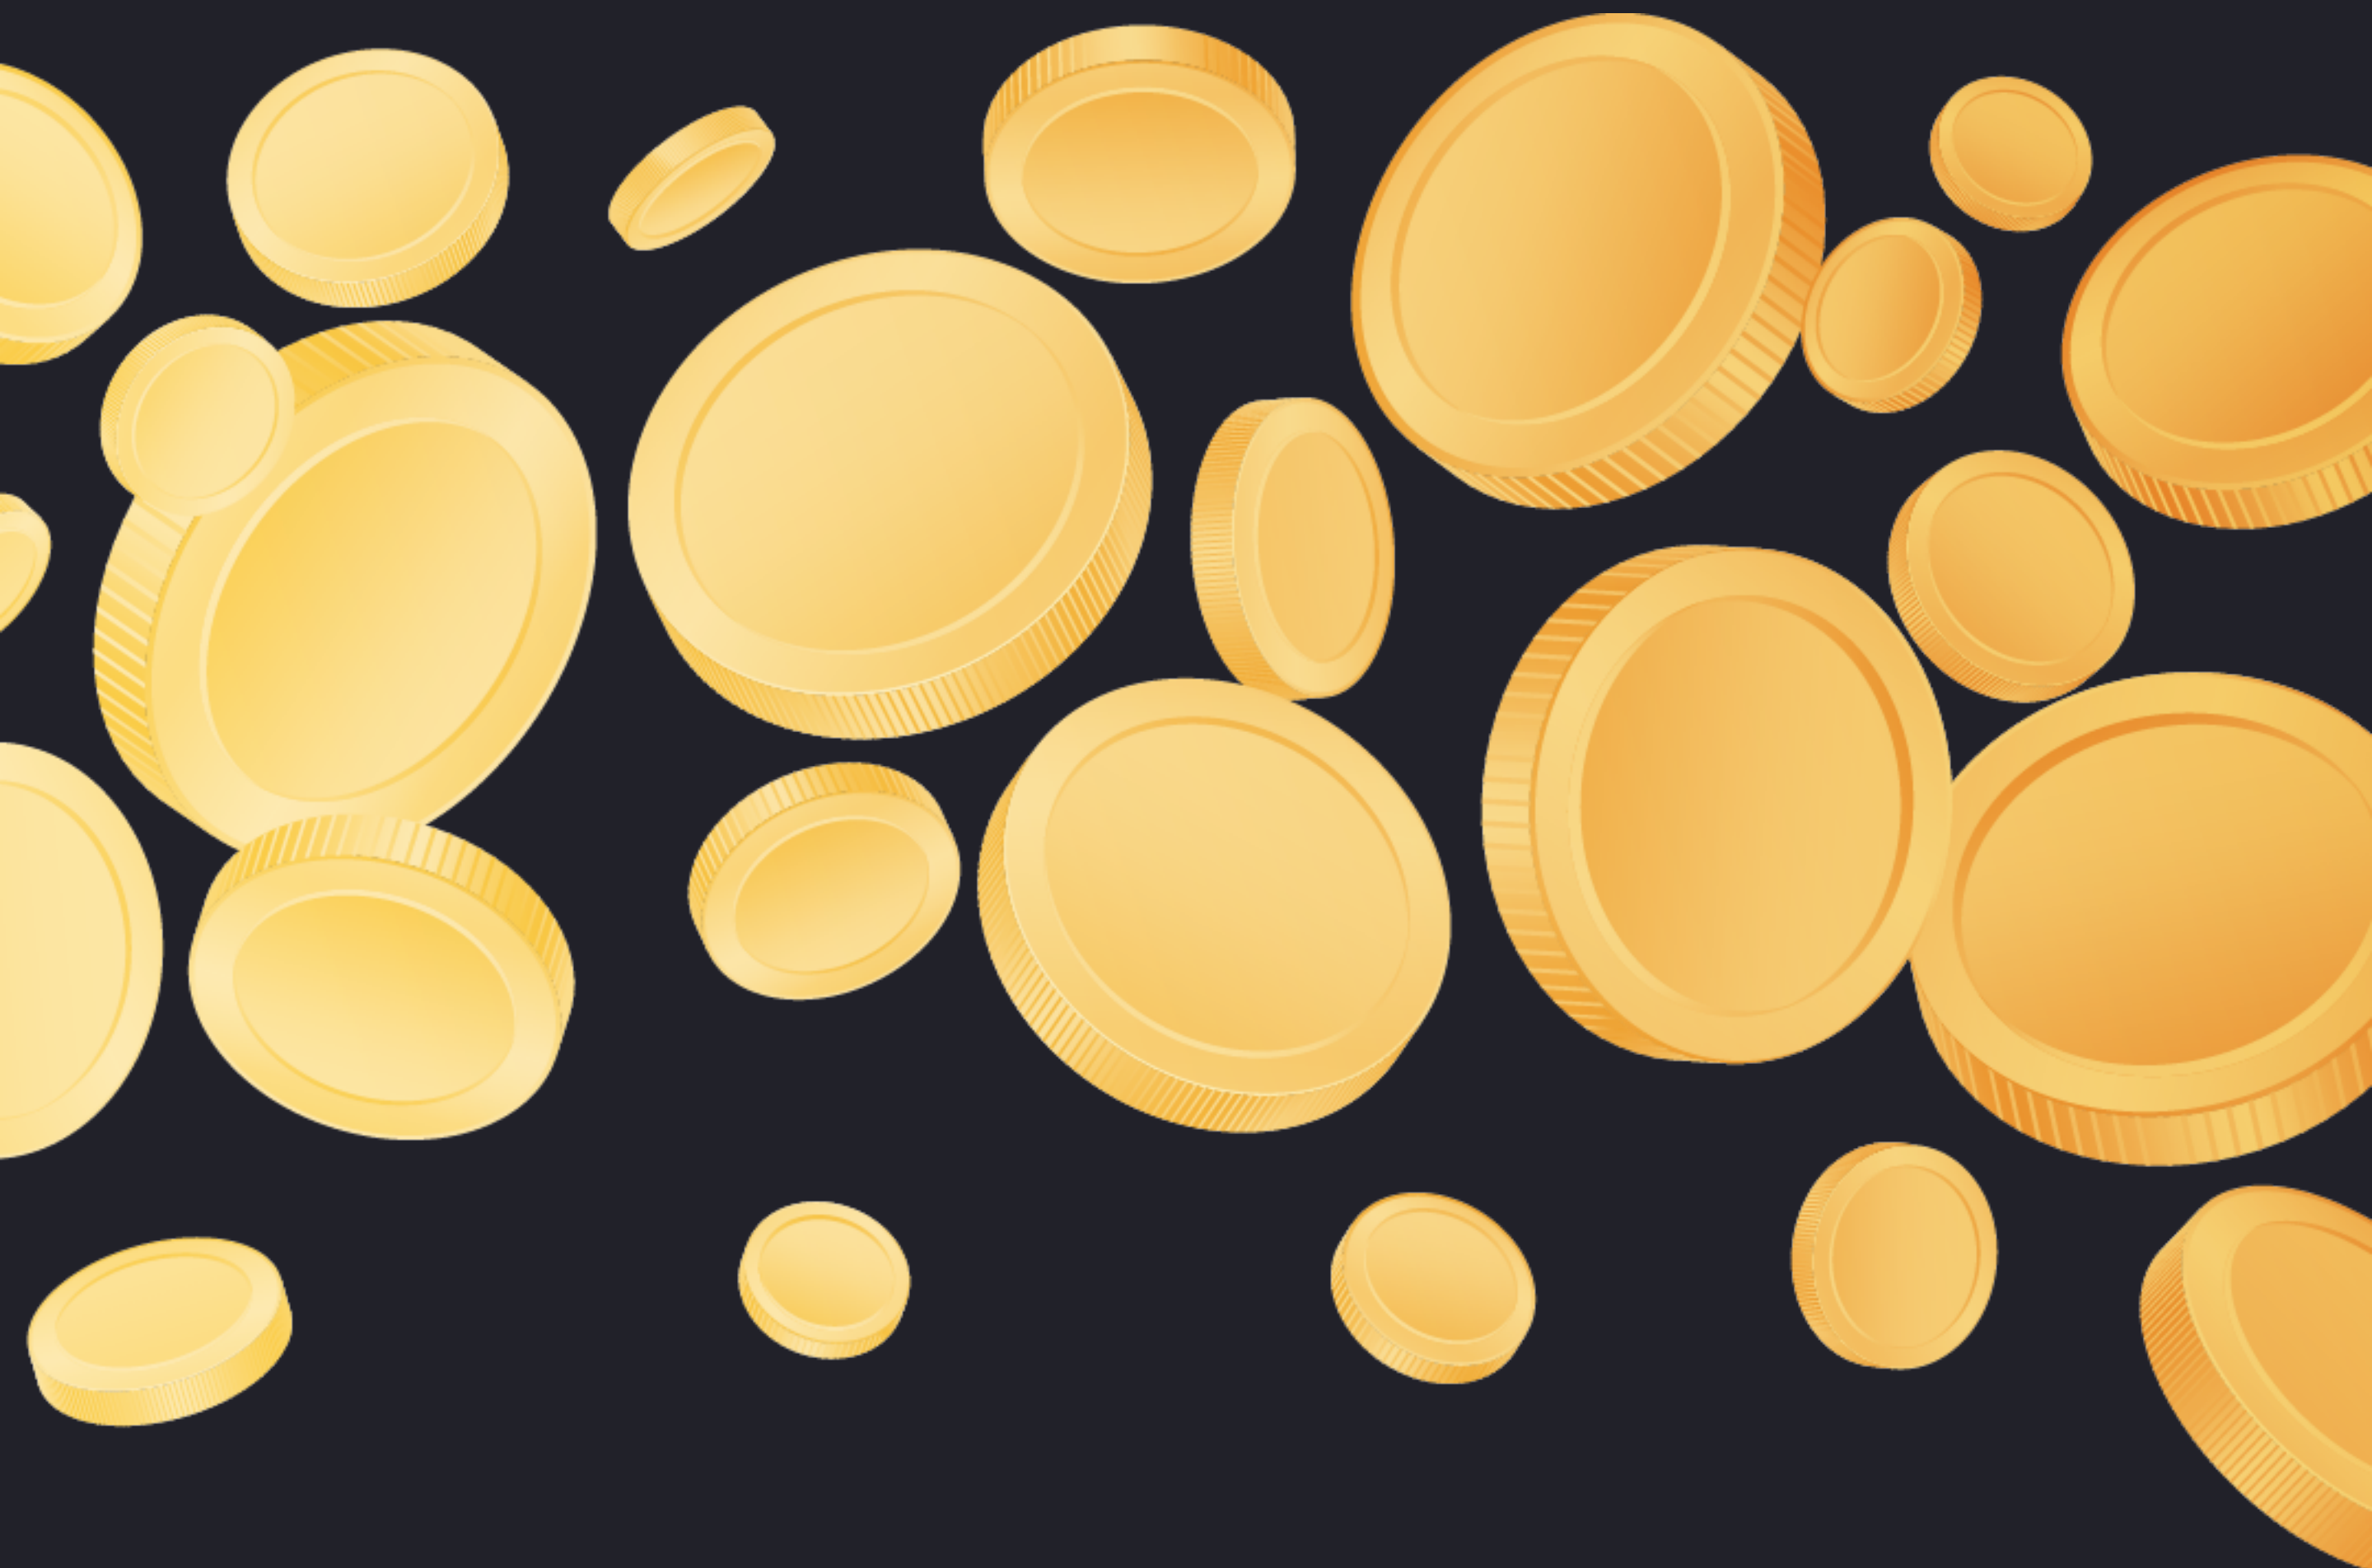

30% are intended for those who matched **3 numbers out of 36**

30% are intended for those who matched **4 numbers out of 36**

30% are intended for those who matched **5 numbers out of 36**

10% goes to the development and marketing fund

Thus, when buying tickets, you are, in fact, investing in your own winnings.

ADVANTAGES OF WYNN LOTTO

A lottery must be fair and transparent. The winnings must depend solely on the luck of the participants and nothing else. In order to achieve this, developers have completely abandoned centralized components and took a number of steps to ensure absolute openness and honesty.

- Wynn Lotto is completely autonomous. It offers no opportunities for external influence on the drawing process, either from the developers of the lottery or from third parties.
- The Tron blockchain is used as a random number generator for the winning combination, which is the hash of the current Tron block. This solves two important problems simultaneously.
 - First, the random number will be truly random, without any possibility of outside influence.
 - Second, the process of generating a winning combination becomes more public and transparent.
- Regular Draws: Using the Tron blockchain allows drawing not only once a week, but every 60 minutes.
- As a guarantor of the safety of the drawing, the purchase of tickets is frozen for one minute, which excludes the possibility of falsifying the winning number and makes it impossible to predict the hash of the block and enter it as a winning number when purchasing a ticket. The acquisition is frozen at the rate of one pair per minute. Initially, there are three pairs of tokens available for purchasing tickets: TRX, USDT, WYNN. The total delay is three minutes.

The combination of these factors favorably distinguishes **Wynn Lotto** from both traditional centralized lotteries as well as other lotteries using blockchain. Most other projects are forced to use centralized components at least during one stage of a lottery (usually when determining a winning combination).

The solution to this problem made it possible to completely eliminate the human factor and the risks of possible manipulation of the results of draws.

HASH ALGORITHM

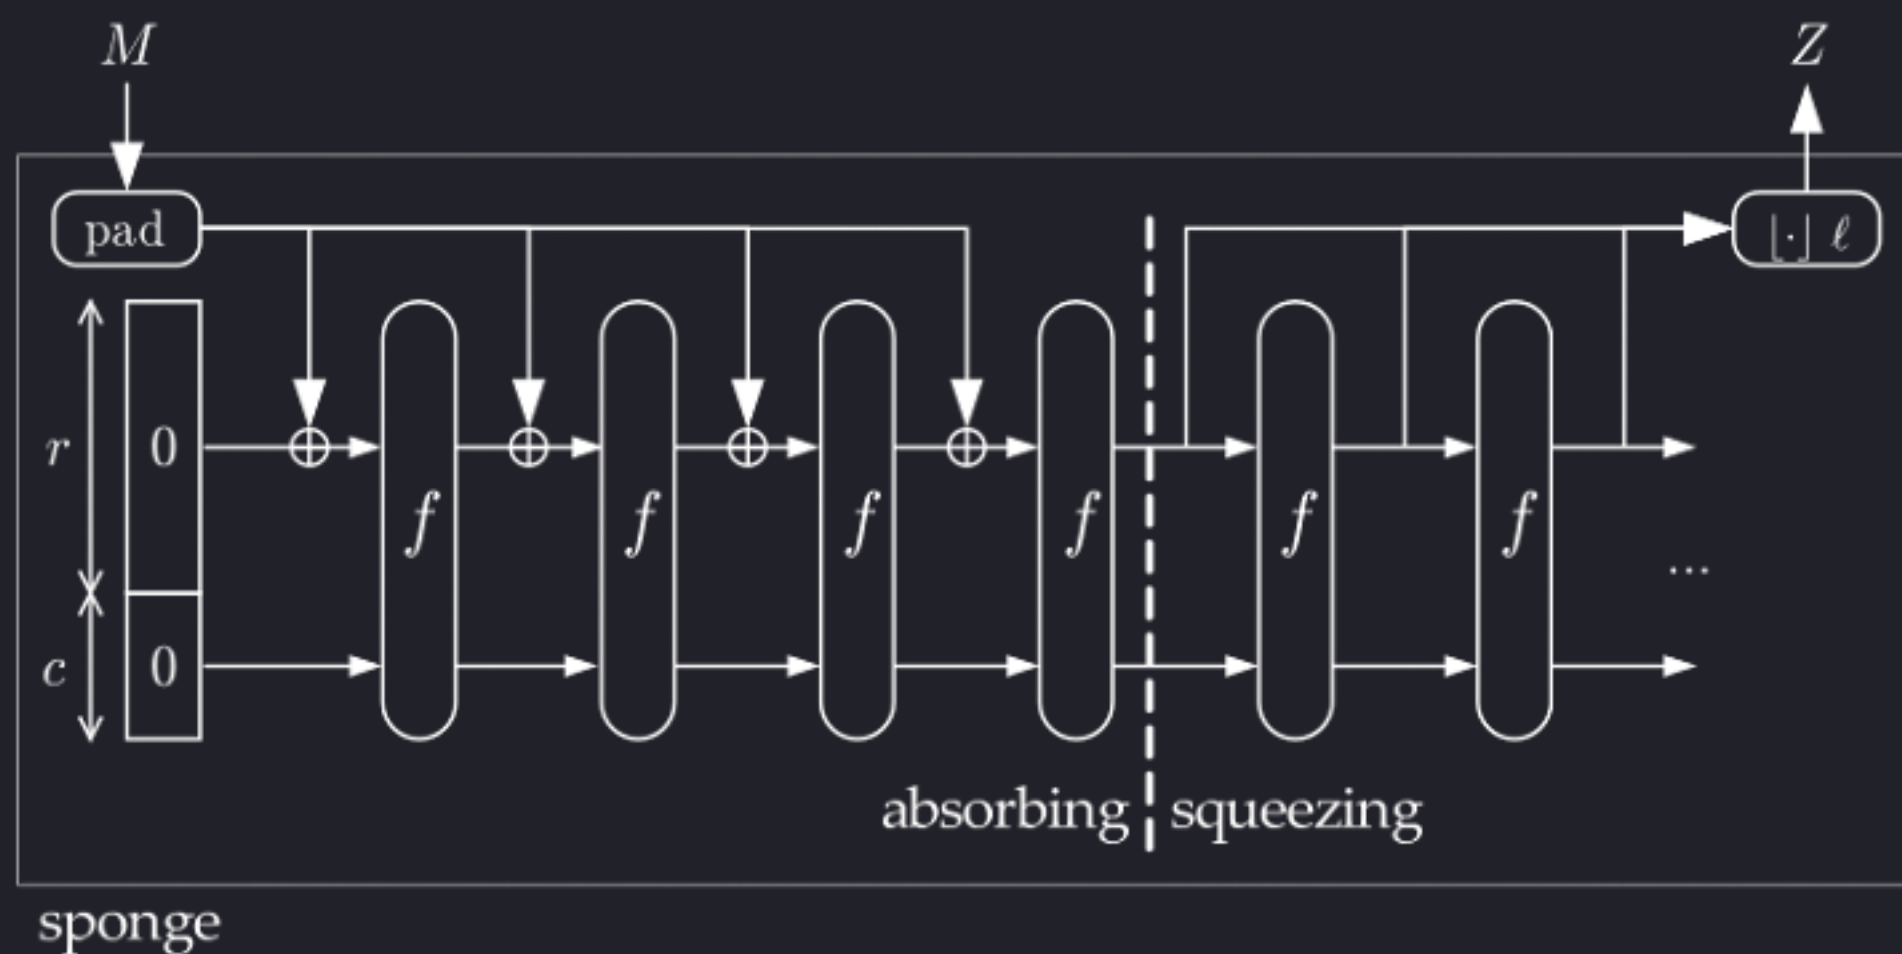

The lottery uses the **keccak256** variable bit hashing algorithm, built on the same principle as a cryptographic sponge.

The keccak256 family hash functions are based on the construction of a cryptographic sponge, in which the data is first «absorbed» into the sponge, where the original message is subjected to multiple rounds of permutations, and the result is «squeezed» out of the sponge.

The sponge function construction is used in the hash function.

Absorbing: The original message (M) undergoes multi-round permutations (f).

Squeezing: Outputting the resulting value (Z) from the permutations.

BINARY OPTION: WYNN BINARY

A **binary option** is a digital contract with a fixed profit, which, depending on the fulfillment of the agreed conditions, either provides a fixed amount of income or generates nothing. In simple terms, a binary option is a bet on price movement. For example, one can bet on a certain financial asset to become more or less expensive in a few minutes. If the user bets on an increase and, at the end of the time interval, the value is higher, the user will earn money. On the flip side, if the value is less, the bet will “go bust”.

There are only two types of binary options in the world: betting and exchange-traded options. **The Wynn binary option** belongs to the second type, which is an exchange-traded option and uses the BNB coin price chart on the Binance exchange in real-time mode. Users are offered contracts to increase or decrease the price:

Time intervals	Reward Ratio
1 minute	1.11
5 minutes	1.25
10 minutes	1.51

In case of a loss, the user loses the entire amount of the bet per contract.

LOYALTY PROGRAM FOR VIP LEVEL USERS

The use of the native Wynn token on the Wynn Games platform provides users the opportunity to participate in the loyalty program for **VIP-level users**, which offers a dynamically growing discount (from 1.1% to 10.1%) for the purchase of tickets or contracts.

Rating	VIP-level	Discount
10	VIP 5	1.1%
150	VIP 4	2.2%
500	VIP 3	3.3%
1000	VIP 2	5.5%
5000	VIP 1	10.1%

WYNN GAMES REFERRAL PROGRAM

To popularize the platform and attract new players, Wynn Games offers its users the opportunity to take part in a referral program.

This is a reward program involving referrals to the Wynn Games platform.

Receiving a bonus for involving a user is possible if the balance of this referral is replenished with more than 10 Wynn tokens. The partner receives a 5% reward of the amount spent by the referral on the platform (<https://wynn-games.com/>).

WHICH PROBLEMS DOES THE WYNN GAMES PLATFORM SOLVE?

Removal of Geographic Restrictions

Getting rid of the pressure of national jurisdictions was one of the initial reasons for the emergence of cryptocurrencies and, as a result, the rapid development of blockchain technologies. Cryptocurrencies know no geographic constraints.

Ensuring Transparency When Determining the Winner

- No one, not even the developers, can influence how the platform works after launch.
- Anyone can make sure that there are no “tabs” either in the ticket or contract allocation mechanism, in the winner determination mechanism, or anywhere else in the contract code.
- The blockchain allows the platform to provide a truly random number generator. For example, the hash of each new block in the Tron blockchain (and in any other) is randomly generated, and there is no way to influence the generation process.

Anonymity

The vast majority of cryptocurrencies do not provide complete anonymity. We all know about the ability to track transactions in the blockchain and link wallets to specific people. However, using the Wynn Games platform, you do not face unnecessary publicity. Yes, everyone will know which address won, but information about your winnings will not enter the public sphere and your identity will remain hidden.

WHICH PROBLEMS DOES THE WYNN GAMES PLATFORM SOLVE?

Payout Speed

In traditional offline services, it takes a few days (at best) to go from winning to actually receiving your prize. Often, this process lasts for weeks or even months. Blockchain completely fixes this problem. The winning payment is instantaneous and the winner receives it in the same way as a regular cryptocurrency transfer with the same conditions and within the same time frame.

Availability

Traditional services limit the pool of potential winners not only geographically, but in various ways. At a minimum, you must have an open bank account where the organizers can transfer your winnings. There are no such conditions for using Wynn Games. No documents are required from participants, there are no restrictions on who can open a wallet in blockchains, and there are no limits on the amount that can be credited to a wallet. Accordingly, absolutely anyone can win and receive their winnings. The only requirement is access to the Internet.

Low Costs

The Wynn Games platform requires no printing of tickets, no expensive TV shows, and no delivery of tickets to remote locations. Basically, all the costs of the draws are reduced to network commissions and perhaps minimal marketing costs. But what does this mean in practice? How does this benefit the average player? It's simple. The cheaper it is to run and maintain the platform, the larger the proportion of the collected funds goes directly into the prize pool.

CONCLUSIONS

Analysis of global trends indicates that interest in lotteries, binary options, and economic games with the possibility of earning real profits continues to grow in almost all parts of the world. Every day, millions of people continue to try their luck in the hopes of multi-million dollar winnings.

Today, the capitalization of this business is **over \$300 billion**. These figures are far from the limit, as the industry actively continues to develop and, today, the average annual growth rate is **~8%**.

This trend is observed all over the world, but users of such platforms are mainly concentrated in Europe, China, and the Asia-Pacific region.

In summary, it's good to note that blockchain technology makes gambling more honest and transparent, but also more accessible and profitable. This is a logical continuation of the evolution in this area of business!

LET'S START PLAYING!

ROADMAP

Stage 1 (2021 2/2)

- Formation of a development team
- Creation of the Wynn Games test platform
- Creation of a crypto lottery based on the Tron network
- Start of beta testing
- Launch of blockchain test network
- Start of alpha testing
- Successful bugfix test
- Launch of the main blockchain on the Tron network
- Start of pre-sale

Stage 2.1 (2022 1/2)

- Coingecko listing
- Token listing on crypto exchanges
- CoinMarketCap listing
- Advertising campaign
- Increase the number of the development staff
- Creation of a "Wynn Binary" option
- Launch of alpha testing for the "Wynn Binary" option

ROADMAP

Stage 2.2. (2022 2/2)

- Move to beta testing
- Launch of the "Wynn Binary" option
- Adding new trading pairs
- Advertising campaign
- Integration of affiliate programs
- Creation of a Wynn RAST server
- Implementation of Wynn as a native payment method

Stage 3 (2023 1/2)

- Update lottery algorithm
- Add new types of lotteries
- Beta testing of "4 out of 20" lottery
- Establishment of the Wynn Games Education Academy
- Launch of the Wynn Games Education Academy video courses

ROADMAP

Stage 4 (2023 2/2)

- Add the ability to buy tickets using cryptocurrencies from the top 10 Coinmarketcap
- Release of a mobile application for Android
- Alpha testing of a mobile application for iOS
- Release of a mobile application for iOS
- Beta testing of "6 out of 45" lottery
- Add the ability to buy tickets using fiat
- Alpha testing of plugins for popular internet browsers
