Introduction

Lotteries, binary options, various economic games with the possibility of earning and other gambling games annually attract millions of players around the world. Some just want to relax after a hard day, others come hoping to hit a big jackpot. In many countries, there are rather strict laws governing gambling business, so more and more players are switching to using online services.

The popularity of lotteries and gambling in recent decades does not even think to decline, especially in developed countries - many want to get even a small chance for a jackpot for extremely modest money. However, every year the problems of traditional services are becoming more and more obvious:

- **Geographic restrictions.**

Most of the traditional lotteries are national. If you live in the wrong country, no matter how many you lucky, the win "does not shine" for you.

- **Opacity.**

No one can give guarantee that the winning combination is really generated randomly, and the numbers are distributed randomly.

- **Distribution of finance.**

Less than 50% of the proceeds from ticket sales in traditional lotteries go to the formation of the prize fund.

- **No anonymity.**

Yes ,you can buy a ticket while keeping your identity a secret, but you won't be able to receive your winnings anonymously. This is due to legal requirements, as winnings are taxed.

All these problems cause natural concern and frustration for users who start looking for alternatives. Using blockchain is the only way to improve things in this industry.

Dedicated platform

Not everyone who is interested in investing is addicted to lotteries and gambling, just like not all players are crypto enthusiasts. For this convenience of users, gaming services such as blockchain lottery, binary options or economic games with the ability to earn money should be hosted on specialized platforms. One of such platforms is **Wynn Games**.

On the Wynn Games platform, users can:

- Create a user account;
- Register a wallet for cryptocurrency;
- Replenish, store and withdraw tokens;
- Purchase lottery tickets;
- Increase your chances of winning by purchasing additional numbers in lottery tickets;
- Use binary options;
- Find out the current size of the prize fund;
- Get acquainted with the winning combination of the current drawing;
- Analyze the results of previous draws;
- Check information about top players;
- Purchase of tokens if you need.

A simple, convenient and intuitive interface, specially designed for lotteries and binary options, will make it easy for even novice players to figure it out.

Using the Wynn token

All settlements within the **Wynn Games** platform are made exclusively in cryptocurrency. The platform accepts for payment: Tron (TRON), Tether (TRC-20) and its own native Wynn token.

For these cryptocurrencies, tickets and contracts are purchased, and winnings are paid in them to the winners.

Using the native **Wynn token** provides a number of advantages over other cryptocurrencies, namely:

- you can buy tickets or make contract with a commission of 0% instead of the standard 10%.
- provides an opportunity to participate in the loyalty program for user VIP-levels, with a dynamically growing discount (from 1.1% to 10.1%) for the purchase of a ticket or contract;
- opens up the opportunity to participate in the referral program.

Wynn token specifications:

Stock ticker: Wynn

Type: token

Blockchain: Tron

Token standard: TRC-20

Issue: 50,000,000 tokens

First distribution

The total emission of the Wynn token is **20,000,000** tokens, which are distributed on special system wallets, each of which has its own intended purpose, which excludes their irrational or inappropriate use.

2,000,000 Wynn - reserved for Pre-Sale;

1,000,000 Wynn - reserve for replenishing the lottery prize fund;

1,000,000 Wynn - a reserve for replenishing the prize fund of a binary option;

2,000,000 Wynn - a marketing fund for promoting and scaling the project.

6,000,000 Wynn - the fund of the development team, is in a frozen state;

38,000,000 Wynn is an operational wallet for replenishing the prize pools of gaming services under development.

Blockchain lottery «Wynn Lotto»

The basic formula of the **Wynn Lotto** is "5 out of 36", that is, to get the maximum win you need to match 5 numbers out of 36. This is the formula of the "old school" lottery, now in traditional lotteries "6 out of 45", "7 out of 49", etc.

What is the fundamental difference? The probability of guessing 5 numbers out of 36 is 1 in 376,992. For 7 out of 49, the probability drops to 1 in 85,900,584. As the saying goes, "feel the difference".

In addition, the lottery gives you the opportunity to increase your chances of winning by buying up to 4 additional numbers to the standard 5. That is, you still need to match 5 numbers out of 36, but there will be no more 5 attempts, but 9. As a result, the probability of winning increases significantly. True, for each additional number you will have to pay separately:

How many numbers in ticket	Price, Wynn
Standart ticket 5 numbers	1
+1 more number in ticket	2
+2 more number in ticket	3
+3 more number in ticket	5
+4 more number in ticket	8

Give like this chance to offer players such chances of winning only because to the use of blockchain technology - almost all the funds spent by the players (no one canceled the network commissions) are sent to the prize pool. The team has no incentive for players to rarely win. On the contrary, as many people as possible are given the chance to "catch their luck by the tail". This is why such high odds and regular draws were introduced.

Prize fund formation blockchain lottery «Wynn Lotto»

The prize fund of each lottery drawing is formed from tokens earned from ticket sales.

90% of the collected funds are directed to it, which are distributed as follows:

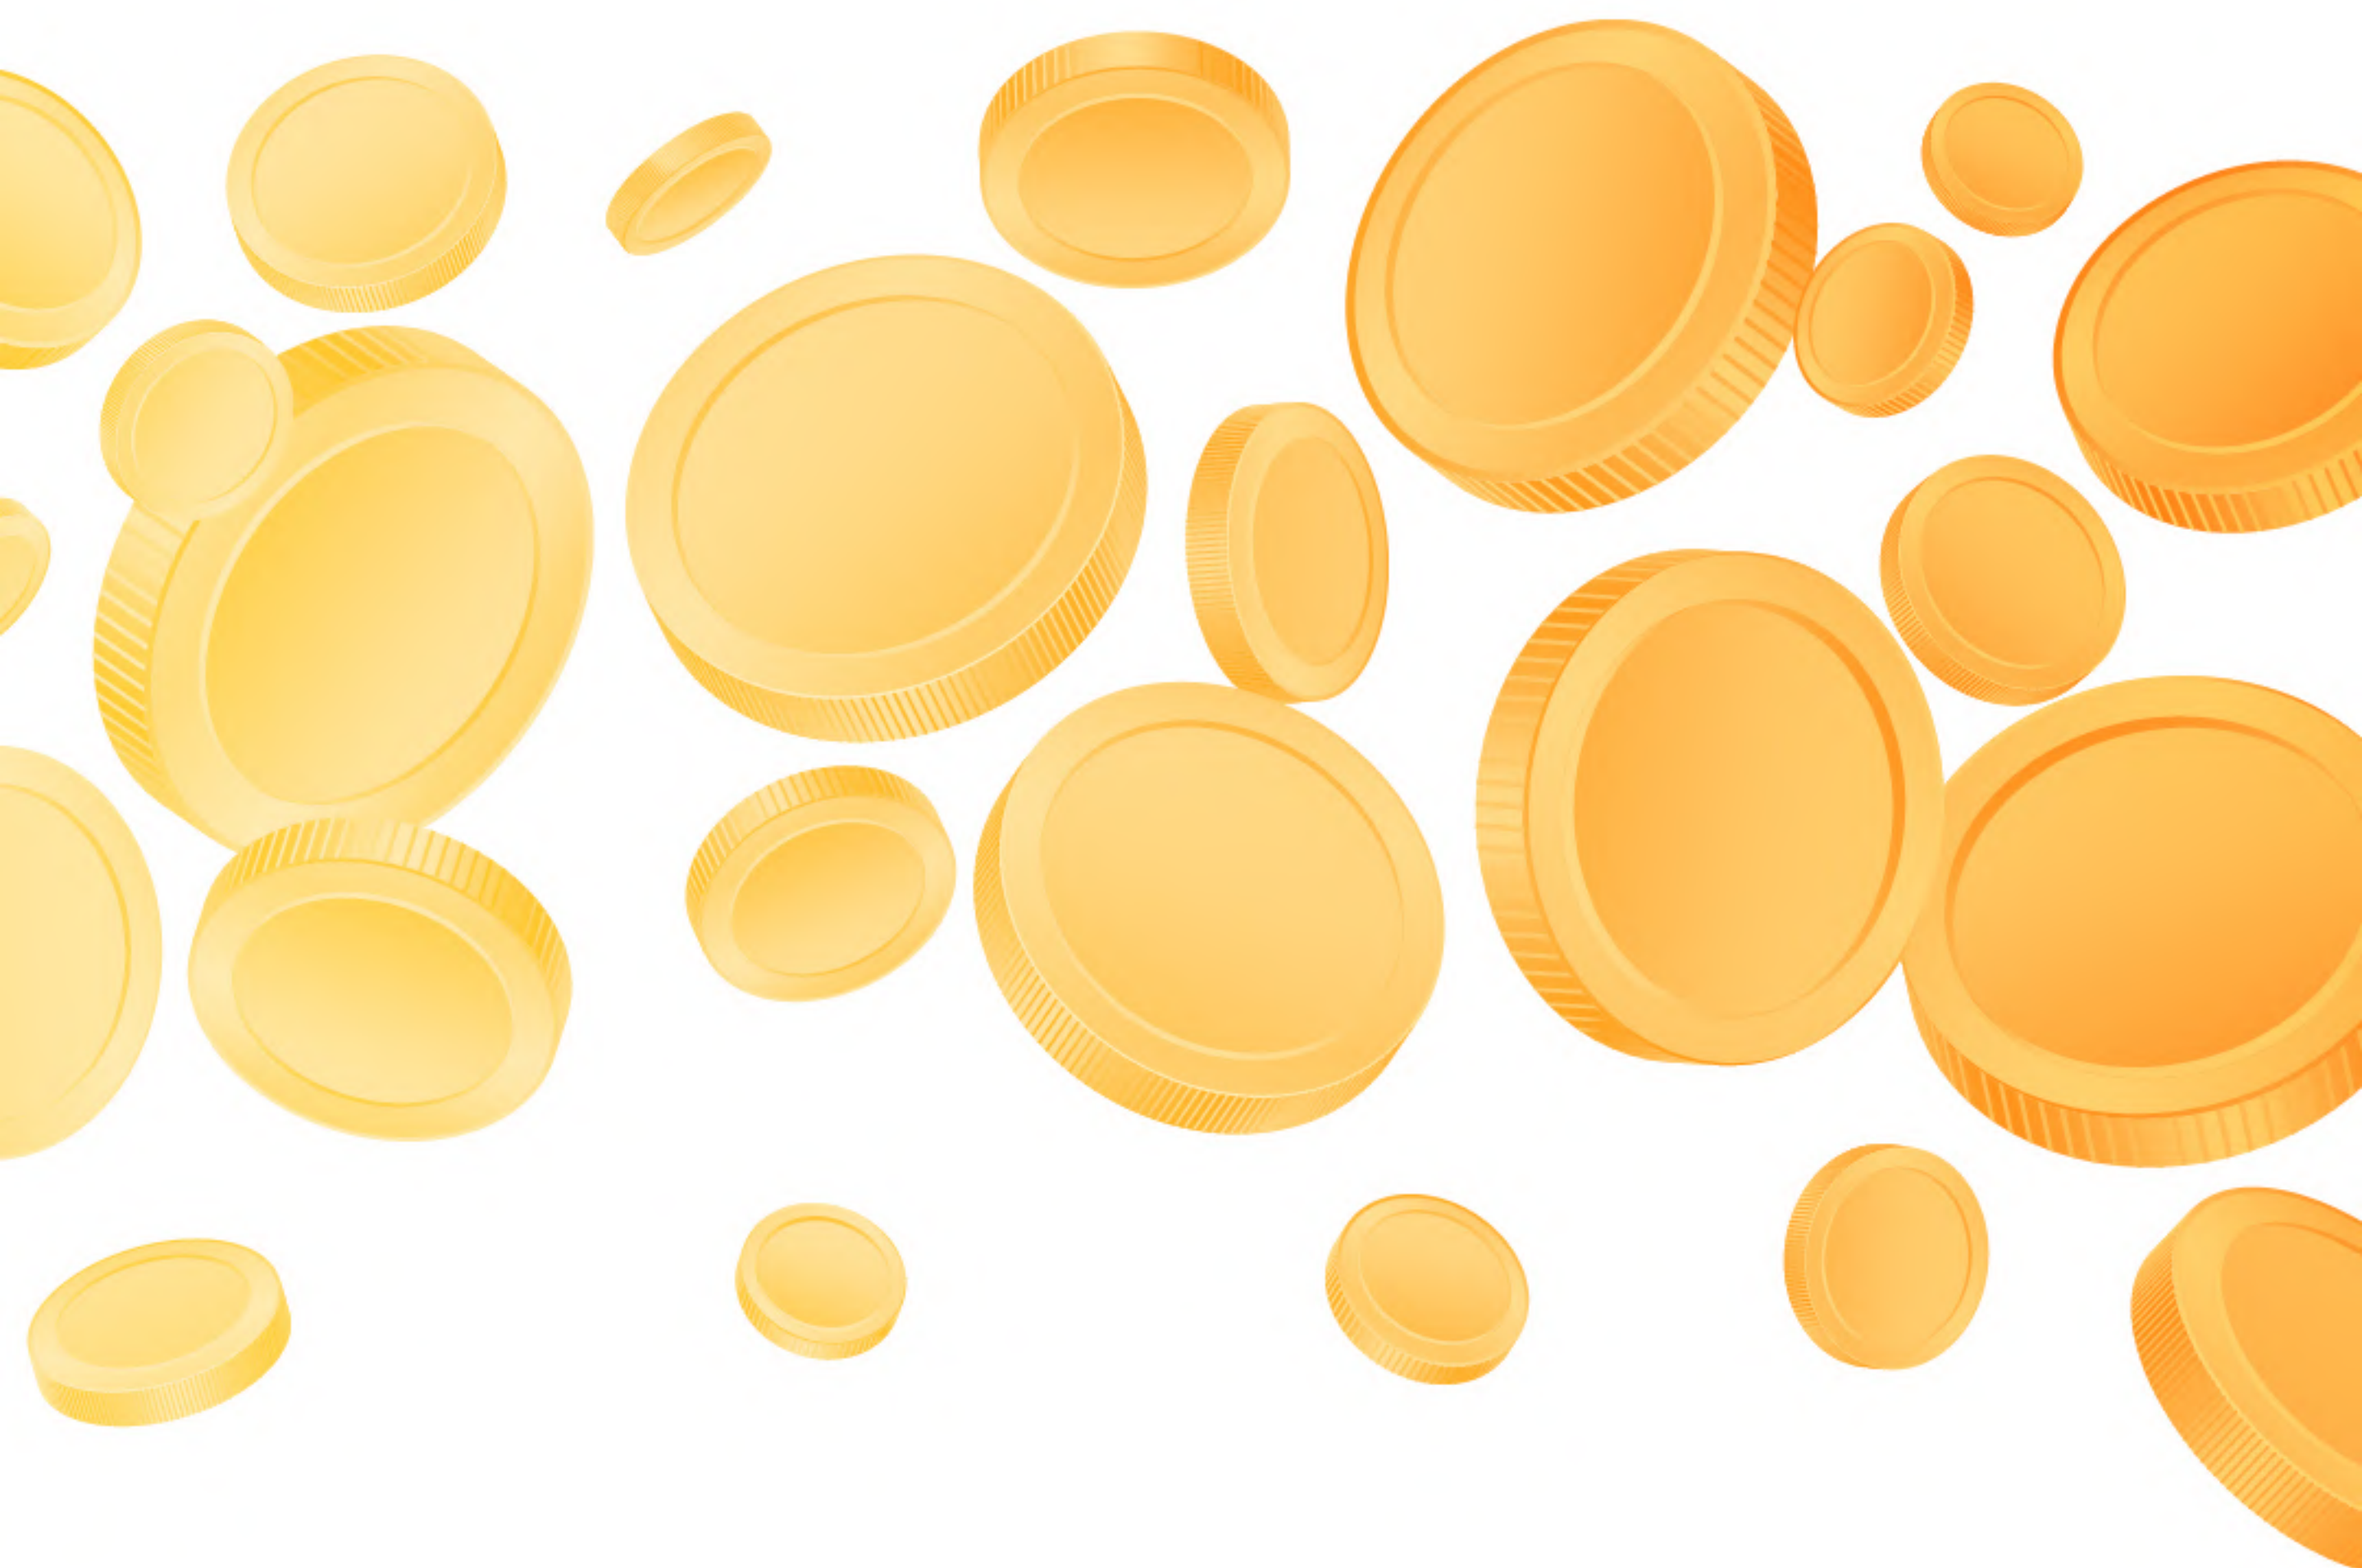

30% are intended for those who guessed **3 numbers out of 36;**

30% are intended for those who guessed **4 numbers out of 36;**

30% are for those who guessed **5 numbers out of 36;**

and only the remaining **10%** are donated to the development and marketing fund.

Thus, when buying tickets, you are, in fact, investing in your own winnings.

Advantages of the «Wynn Lotto» blockchain lottery

The lottery must first of all be fair and transparent. The winnings should depend only on the luck of the participants and on nothing else. In order to achieve this, the developers have completely abandoned the centralized components and have taken a number of steps to ensure absolute openness and honesty.

- Wynn Lotto is **completely autonomous**, without any opportunities for external influence on the drawing process, either from the developers of the lottery or from third parties.
- **The Litecoin blockchain** is used as a random number generator for the winning combination in the lottery. The winning combination is the hash of the current Litecoin block. This solves two important problems at once. First, the random number will be truly random, without any possibility of outside influence. Secondly, the process of generating a winning combination becomes public and transparent.
- Regular draws: using the Litecoin blockchain allows drawing not once a week, but **every 60 minutes**.

The combination of these factors makes **Wynn Lotto** stand out from the background not only of traditional centralized lotteries, but also against the background of other lotteries using blockchain. Most other projects are forced to use centralized components at least at one of the stages of the lottery, most often when forming a winning combination.

The solution to this problem made it possible to completely eliminate the human factor and the risks of possible manipulation of the results of the draws.

Hashing algorithm

The lottery uses the **SHA-3** variable bit hashing algorithm, built on the principle of a cryptographic sponge.

The SHA-3 family hash functions are based on the construction of a cryptographic sponge, in which data is first "soaked" into the sponge, in which the original message is subjected to multi-round permutations, then the result is "squeezed" out of the sponge.

The construction of the sponge function used in the hash function: **P_i** - input blocks, **Z_j** - output of the algorithm.

Binary option «Wynn Binary»

A **binary option** is an “all or nothing” option with a fixed profit, which, depending on the fulfillment of an agreed condition at a specified time, either provides a fixed amount of income or brings nothing. In simple terms: a binary option is a bet on price movement. You can bet that a certain financial asset will become more expensive or cheaper in a few minutes. If the user places a bet on the increase in value and at the end of the time interval the cost will be higher, the user will earn money; if it costs less, the rate will “burn out”.

There are only 2 types of binary options in the world: betting and exchange. The **Wynn binary option** belongs to the second type - an exchange option and uses a realtime chart of the price of a BNB coin on the Binance exchange. At the service of users are offered contacts to increase or decrease the price:

Time intervals	Remuneration ratio
1 minute	1,22
5 minutes	1,33
10 minutes	1,55

If it's a loss, the user loses the entire amount of the bet per contract.

Loyalty program for custom VIP levels

The use of the native Wynn token on the **Wynn Games** platform provides users with the opportunity to participate in the loyalty program for custom VIP levels, with a dynamically growing discount (from 1.1% to 10.1%) for the purchase of tickets or contracts;

Custom VIP levels are assigned by the system automatically upon reaching certain levels (see table):

Price, Wynn	VIP-level	Discount
10	VIP 5	1.1%
150	VIP 4	2.2%
500	VIP 3	3.3%
1000	VIP 2	5.5%
5000	VIP 1	10.1%

Wynn Games referral program

To popularize the platform and attract new players, Wynn Games invites its users to take part in the referral program.

This is a reward program for referring referrals to the Wynn Games platform.

Receiving a bonus for attracting a user is possible provided that the balance is replenished with more than 10 Wynn.

What problems platform solves

Removing geographic restrictions

Getting rid of the pressure of national jurisdictions was one of the main initial reasons for the emergence of cryptocurrencies and, as a result, the rapid development of blockchain technologies. Cryptocurrencies do not know geographic restrictions.

Ensuring transparency in determining the winner.

- Firstly, no one, not even the developers, can influence the operation of the platform after launch.
- Secondly, anyone can make sure that there are no “tabs” in the ticket or contract allocation mechanism, or the winners mechanism, or anywhere else in the contract code.
- Third, the blockchain allows the platform to be provided with a truly random , random number generator. For example, the hash of each new block in the Tron blockchain (and in any other) is generated randomly, and there is no way to influence the generation process.

Anonymity

The vast majority of cryptocurrencies do not provide complete anonymity. We all know about the ability to track transactions in the blockchain and link wallets to specific people. However, when using the Wynn Games platform, you do not face unnecessary publicity - yes, everyone will know which address won, but information about your winnings will not get into the public sphere anyway.

What problems platform solves

Payout speed

Между выигрышем и фактическим получением выигрыша победителем в традиционных офлайн сервисах проходит в лучшем случае несколько дней, а зачастую процесс растягивается на недели и даже месяцы. Блокчейн эту проблему устраняет полностью – выплата выигрыша происходит мгновенно, и победитель получает его точно также, как и обычный перевод криптовалюты – на тех же условиях и в те же сроки.

Availability

Traditional services limit the pool of potential winners not only geographically. At a minimum, you must have an open bank account where the organizers can transfer the winnings. When using the Wynn Games platform, this problem is not possible. No documents are required from the participants, there are no restrictions on who can start a wallet in blockchains, there are no limits on the amount that can be transferred to the wallet. Accordingly, absolutely anyone can win and receive a prize, the only requirement is access to the Internet.

Low costs

For the Wynn Games platform, you don't need to print tickets, pay or make expensive TV shows, or arrange for ticket delivery to remote corners. By and large, all the costs of running the draws are reduced to network commissions and, possibly, minimal marketing costs. But what does this mean in practice? What is the benefit for the average player? It's simple - the cheaper it is to host and maintain the platform, the greater part of the collected funds goes directly to the prize pool.

Findings

Analysis of global trends shows that in almost all parts of the globe, interest in lotteries, binary options and economic games with the ability to earn money continues to grow. Millions of people continue to try their luck every day in the hope of multi-million dollar winnings.

The capitalization of this business, today is **over \$ 300 billion**. These figures are far from the limit - the industry continues to develop actively, and today the average annual growth rate is about **8%**.

This trend is observed all over the world, but the main regions in which users of such platforms are concentrated are Europe, China and the Asia-Pacific region.

Summing up some of the results, I would like to note that blockchain technology makes gambling not only more honest and transparent, but also more accessible and profitable. This is a logical continuation of the evolution in this area of business!

let's start playing!

Auxiliary map

Q3 2021

- beta testing of the platform
- starting a lottery
- launch of a binary option
- start Pre-Sale
- listing on a crypto exchange
- marketing activities to promote the Asian markets

Q4 2021

- adding the ability to settle with cryptocurrencies
Bitcoin, Litecoin
- marketing activities to promote the European market
- beta testing of a mobile application for Android
- listing on a crypto exchange
- participation in the international conference of
lottery and gambling developers
- beta testing of an economic game with the
possibility of earning

Auxiliary map

Q1 2022

- marketing activities to promote the Latin American market and Spanish speaking countries
- adding the ability to settle using stablecoins USDC, DAI, PAX
- beta testing of the lottery "4 of 20"
- release of a mobile application for Android
- beta testing of a mobile application for iOS

Q2 2022

- adding the ability to buy tickets using cryptocurrencies from the top 10 Coinmarketcap
- marketing activities to promote the North American market
- release of a mobile application for iOS
- beta testing of the lottery "6 out of 45"
- adding the ability to buy tickets using fiat
- beta testing of plugins for popular internet browsers
